### **For Immediate Release**

**Atlanta, GA, February 26, 2024** – The Rainwater Construction Company, an Atlanta-based pre-engineered metal building contractor specializing in the construction of buildings 50K to 100K square feet, recently released a company insights video detailing their capabilities as a Butler® Manufacturing volume builder, their expertise in metal roofing and roof retrofits, and their decades of experience supporting warehouse, distribution and light manufacturing clients in Georgia and beyond.

In the video, Rainwater President, Steven Hudgins discusses his team's qualifications and provides examples of the company's success as a turnkey design-build general contractor and self-performing steel erector specializing in systems construction.

Hudgins notes that Rainwater has completed more than 2,700 projects over its nearly seventy years serving the Georgia commercial construction market. This experience makes the Rainwater team uniquely qualified to help warehouse and distribution clients by helping them navigate the area's code and permit processes and by providing them with building expertise and guidance based on a deep knowledge of PEMB construction.

The company insights video will be hosted on the Rainwater Construction Company website, <https://www.rainwaterconstruction.com/leadership-team/>, as well as on the Rainwater Construction Company YouTube channel:

[Rainwater Construction Company - Corporate Overview](#)

As investment in Georgia ports and infrastructure continues, the need for qualified PEMB erectors has never been greater. We invite all companies serving the warehouse, distribution and light manufacturing industries in Georgia and throughout the southeast to share this video with entities in need of a turn-key, design-build general contractor. We also welcome inquiries from general contracting companies in need of a partnership with a PEMB steel erection partner. Recent Rainwater Construction projects include work for Waste Management, Georgia Ports Authority and Swift Atlanta.
